Yauheni (Eugeniusz) Travinau

FROM IDEA TO A WORKING SOLUTION WITH AI

Wrocław, Poland j.travinov@gmail.com +48 880 444 275 Driving licence B linkedin.com/in/bliss-hart github.com/YauheniTravinau

I combine practical use of AI with building digital products. I build websites and web apps, Windows programs and work-automation tools on my own — from idea and prototype to a test in real use. I have 10 projects of my own: web, desktop, Android and AI.

I am looking for an environment where I can apply technical thinking and independence to solve concrete problems, and grow towards AI and automation.

01 Experience

2025 — present

WEARTECH SOLUTIONS • Wrocław

Service technician

- Diagnostics, servicing and solving technical problems in a B2B environment.
- Independent root-cause analysis of faults and choice of the right solution.
- Accuracy and ownership of the result; quickly learning new technical solutions.

2019 — 02.2023

Amazon • Poland

Warehouse operations → logistics

- Promoted from warehouse work to the logistics department.
- Coordinating vehicle arrivals and departures; working in several systems at once.
- Communicating with international drivers by chat, radio and phone — in an environment that demands focus and quick decisions.

02 Strengths

- Fast path from idea to prototype
- Independent searching and testing of solutions
- One author, 11 roles: from frontend and databases to tests, data and AI
- Taking projects all the way to real use

How I work with AI

I do not treat AI as a replacement for knowledge but as a tool that speeds work up. I choose the model for the problem, compare approaches, analyse the results and verify them in practice — so I learn new technologies faster and move from problem to solution more efficiently.

AI / DEVELOPMENT

Claude · ChatGPT · Codex · Gemini · DeepSeek · Copilot · Cursor · Canva AI · Prompt Engineering · AI-assisted coding

WEB / FRONTEND

HTML · CSS · JavaScript · React

AUTOMATION / TOOLS

Automation · API · Git · Research · SEO · Debugging with AI

Languages

Belarusian	native
Russian	fluent
Ukrainian	conversational
Polish	conversational
English	basic

03 Selected technology projects

AI + FULL-STACK + DEPLOYMENT

AA-EU Coins — auction platform

Auction marketplace for collectors: live bidding with auto-bids, a catalogue with filters, a seller dashboard (commissions, PDF invoices) and an admin panel. Built with heavy AI use — from plan to deployment on a server (Docker, backups).

`Next.js · React · TypeScript · PostgreSQL · Redis · Docker`

aa-eucoins.de

Idea → AI-assisted build → server → product

API + AUTOMATION + TELEGRAM

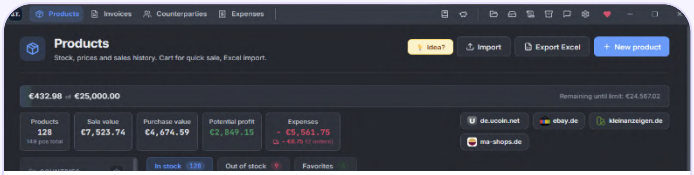

CryptoGemScanner

A service that analyses the crypto market from API data (CoinMarketCap, CryptoCompare): A/B/C signal-quality scoring, a risk zone and automatic publishing to the website and Telegram. Trade journal with PnL.

`Python · Flask · API · Telegram Bot API`

cryptogemscanner.com Telegram

API → analysis → signal → publication

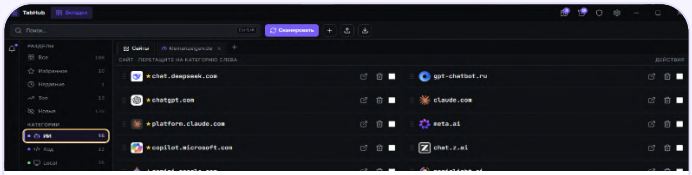

WINDOWS APP · OFFLINE-FIRST

Accounting & inventory

Offline desktop app for small businesses in Germany: PDF invoices and archive, EÜR profit calculation, DATEV export, Kleinunternehmer limit control. UI in DE · RU · EN, Windows installer. Used in my own business.

`Go · Wails · React · TypeScript · SQLite`

Own workflow → own tool

WINDOWS APP · PRODUCTIVITY

TabHub — links & bookmarks

A second desktop app: categories, favourites, search and scanning of links, plus reminders — daily organisation of information.

`Windows desktop`

Problem → prototype → useful tool

AUTOMATION · PC + ANDROID

SMS dialogue system

Operator app for PC, an Android app (2 SIM cards over USB) and a client panel. Reply scenario, opt-out (STOP) detection, 300 SMS/day per SIM and a 09:00–20:00 window, 14-day funnel analytics (hour, list, SIM), Excel reports and tests.

`Node.js · React · Android · Excel`

Scenario → limited sending → report

PRODUCT DESIGN · DOCUMENTATION

CactusOS — specification v1.0

My own concept of a privacy-first Android ROM for the Xiaomi Redmi 6A: technical specification v1.0 ("approved baseline"), a clickable RU/EN interface prototype, an owner + employee model, zero telemetry.

`Specification · HTML prototype · Android / LineageOS`

Concept → specification → prototype

More projects: **MY TIME** — offline one-tap time tracker (React, Android; 49 unit tests) **DevHub** — one window to run local projects (Electron) **Aura Browser** — privacy-first browser with isolated tabs (Electron) **Supply Lens** — supplier comparison with full landed cost (Python, PySide6) **VESNA** — local AI coding agent, no cloud (Python, llama.cpp)

04 Education & courses

JavaScript + React
FutureCollars · 2022–2023

IT Help Desk
Nova Centrum Edukacyjne · 2021

Civil engineer
Polotsk State University · 2017

05 Where I want to grow

I want to grow towards AI Engineering and automation — especially applications that use AI models, agents, APIs and automated workflows. I care about experience on real products and gradually taking on more technical responsibility.
